

THE CRANIO-DENTAL PARADIGM 1

The Cranio-Dental Paradigm was developed with the intention of bridging the gap between the osteopathic, dental and medical communities, using a language and understanding appropriate to all.

This course has a two-fold benefit of being able to truly comprehend, through intellect and palpation, the principles and therapeutic application of Osteopathy in the Cranial Field (OCF) to the head and face.

The CD 1 course will explore the embryological and anatomico-physiological development of the cranial base and face and explore how their relationship can influence occlusion, mastication, swallowing, ENT and breathing conditions. It will give you the clinical skills that will allow you to improve your management of such conditions

The course is being presented in 2 parts:

- A. Introduction to the osteopathic principles of the craniodental paradigm
- B. The clinical applications and management

In order to get the full benefit of the course it is advisable to attend both modules that will run in the later parts of June and July 2015.
