AACP Australian Chapter 7th Annual Symposium:
Secrets of Success in Sleep and Pain: A Clinical Guide

Dentistry demands a lot from you. Every appointment you make numerous clinical judgements that affect patient outcomes, your reputation and the bottom line.

Treating people with chronic facial pain can throw a big torque wrench into the works. While there is no cookbook approach for diagnosing and treating facial pain, systems exist that increase the ease of diagnosis and help you treat effectively to provide a successful outcome.

This course is designed to demystify confusing aspects of orofacial pain and sleep therapies: Are you clear on when and what tests to order? Learn how to do a cranial nerve evaluation. Clarify reading sleep studies and MRI. Learn which medications bring results.

Recognise some of the unusual presentations of sleep and pain disorders to become a more effective practitioner.

AACP Australia brings you clinicians from around the world to show how to make providing pain and sleep therapy a more predictable and enjoyable part of your clinical day.

How many of us would be confident that we would even know where to start if this situation happened in our clinics? After this has happened we may all know to have our patients protrude their tongues, but that is not the only cranial nerve that can be affected by an intracranial process. If we are treating patients with pain and headache, as well as patients with OSA we need to know how to do this.

In his lecture “Red Flags in a Cranial nerve Assessment: Why does your Patient have a Crooked Smile” Professor Benoliel will take us through the clinical process of completing a cranial nerve examination, and show us examples of what we should be looking for. It is an amazing feeling to know that you have been a part of potentially saving someone’s life, and none of us ever want to experience the sinking feeling of knowing that we missed something crucial.

Join us in March to hear this very important presentation.

Friday March 9-11th 2018 at the Sydney Harbour Marriott Hotel

The AACP Australian Chapter thinks that if you would like to attain formal qualifications in the area of Orofacial pain from an Australian University we highly recommend this online course, which commences in 2018.

The Master of Medicine (Pain Management) is an evidence-based and clinically relevant program that explores the problem of pain in the community and the role of health professionals in managing and treating a range of pain conditions. This program will provide you with knowledge and strategies to prevent acute and sub-acute pain from progressing to chronic and disabling pain, and refine your ability to work in a multidisciplinary team to achieve this goal. You will learn from local and international academic clinicians and researchers including neuroscientists, anaesthetists, pharmacologists, clinical psychologists, psychiatrists, nurses, physiotherapists and research personnel, all widely experienced in pain management practice... learn more
